BENDING EQUIPMENT

Introducing the new

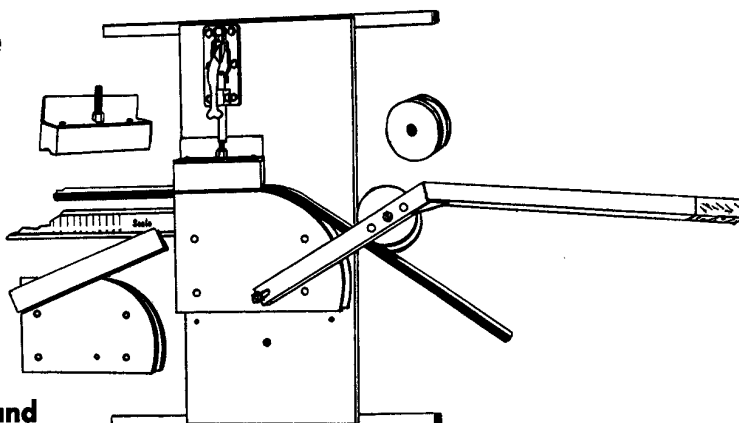

BEND ARC

Today many tubing benders offer features such as easy operation, measuring aids and portability. A resourceful fabricator may find that an upgrade in bending equipment could benefit his or her business.

The only tubing bender with a computer generated scale that takes the guesswork out of calculating exactly where to make each bend!

- All components are mounted on steel frame for strength and durability.
- Easily bends 1", 7/8" & 3/4" stainless and aluminum tubing.
- Available in 6", 8" or 10" radius.
- Wall mounting saves space.
- Quick-Switch dies are available to change radius and O.D. of bender

10" RADIUS BEND ARC
STYLE: 7/8" OD BA3478-10
STYLE: 1" OD BA1-10

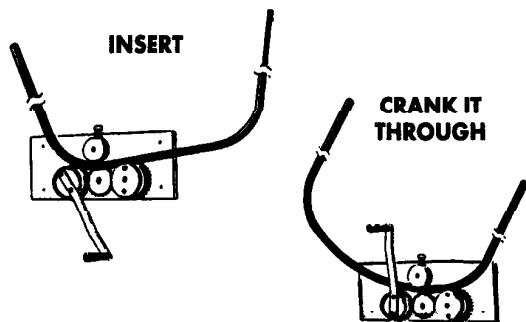

This bender has all the components mounted on solid steel frame, and the retention forming block is precision cut from the toughest of polymers. Measuring scale means no blown bends and no scrap.

The scale means you don't waste time figuring, calculating, just measure, cut and bend.

CROWNARC

The Crownarc is just as easy: insert your bow as on illustration and tighten the knurled knob 1/2 to 1 turn and crank the bow on through. If you wish more arc, tighten some and crank the bow back. Crowns 3/4", 7/8" or 1" tubing.

CROWNARC STYLE: CA13478HD
